

Machine Learning for Radiometer Calibration

Samuel Alan Kossoff Leeney

2nd Year PhD Candidate

With: Harry Bevins, Eloy de Lera Acedo, Will Handley, Rohan Patel, Kaan Artuc, Jiacong Zhu

`images_compressed/ml_overview.pdf`

Testing on internal validation source

`images_compressed/temps.pdf`

Neural Network Time Evolution

`images_compressed/nn_time.pdf`

Inject system drift

`images_compressed/temps_combined_2d.pdf`

Modeling environmental features

`images_compressed/nn_time_tpm.pdf`

We can train on features that cannot be modeled analytically

Component Modelling

Learn the effect of complex internal components such as switches, cables, etc

Temporal Dynamics

Learn time dependant system behaviour

Extended Inputs

Train on non-standard inputs, such as box temperature
